

## Perfect Verifier- QR/Barcode code generation and Verifier Application

The ATPL-Perfect Verifier Software is a cutting-edge solution for personalized QR/barcode printing, integrating software and hardware seamlessly. It adeptly generates QR/barcode labels for diverse categories, verifying them with batch-specific products, individual units, and part numbers. The application also features error identification to ensure accurate verification of dispatched products.

### Key Features of Quality Verifier Application

- Realtime collaboration
- Data Integration
- QR/Barcode Generation
- Printer Compatibility
- Batch wise Printing
- Error Reporting Alert
- Data Encryption
- Product verification
- Workflow Automation
- Quality control

Our perfect verifier software offers an intuitive QR/Barcode generate interface, allowing users to easily verify the product by incorporating every batch wise production goods.

*Digitalizing  
your Quality  
Verifier  
System*

Explore the possibility of integrating with external software systems via APIs, including inventory management and e-commerce platforms. Additionally, enable seamless integration with external databases, ERPs to retrieve and incorporate dynamic data into QR/Barcodes.

It ensure that the part number of the product matches its QR/barcode when keeping it in the warehouse or dispatch section. The application is designed with alerts, allowing for a quick scan and readiness for delivery, ensuring batch-wise accuracy of the right product.

This application is compatible with both on-premises and cloud-based setups, offering functionality with or without Internet support depending on customer preferences. It is versatile, supporting various devices such as Android and others.
